# Multi-attribute Pizza Generator

Cross-domain Attribute Control with Conditional StyleGAN

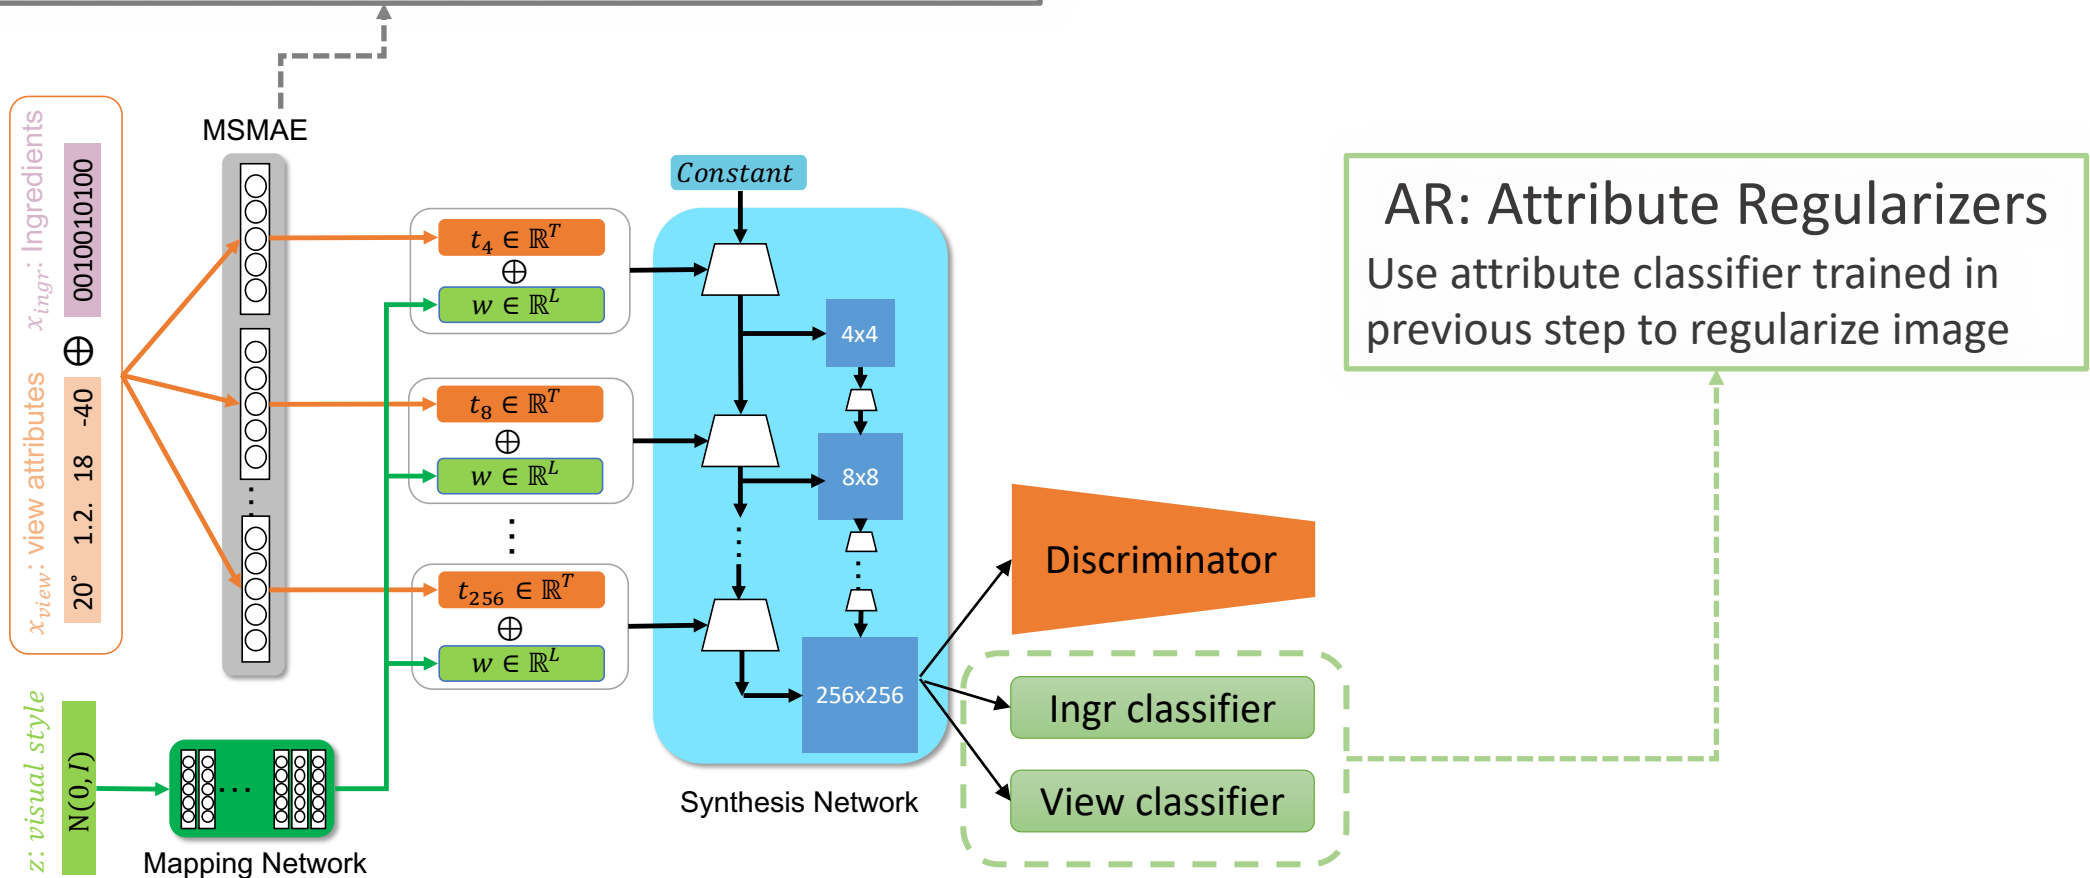

[Fangda Han](#), Guoyao Hao, Ricardo Guerrero, Vladimir Pavlovic

# Cross-Domain Training

# MSMAE: Multi-Scale Multi-Attribute Encoder

- Conditioned on discrete ingredient labels, continuous view labels, and visual style
- Learn label embedding for each scale (resolution) separately

AR: Attribute Regularizers  
Use attribute classifier trained in previous step to regularize image

# Results

# Contribution

leverage two domains (real+3d), which have different labeled attributes, with different attribute ranges,
